

Rin Nadia · Software Engineer · AI/ML Engineer · Information Security

rin.nadia.23@gmail.com | 010-2894-1910 | Seoul | F-2 (Residence)

Indonesian (Native) · English TOEIC 895 / IELTS 7.0 · Korean TOPIK 4 / KIIP 5

A Seoul-based software and AI engineer who has grown through hands-on experience across diverse projects in the telecom, finance, and enterprise sectors. Has contributed to real-world projects spanning multiple technical domains — including RAG-based AI systems, event-driven microservices, ETL pipelines, and containerized cloud environments. Holds an M.S. in Information Security from Sejong University (GPA 4.25/4.5), with IEEE publications in IoT security and machine learning, and a Best Paper Award from the Korean Institute of Communications and Information Sciences.

Skills

Language	Java, Python, TypeScript, SQL
AI / ML	LangChain, RAG, Elasticsearch, PyTorch, Keras, Scikit-learn, Jupyter Notebook, Cohere API
Backend	Spring Boot, Spring Batch, Node.js, Flask, FastAPI, REST API, Microservices, RabbitMQ, Apache ActiveMQ, WebSocket
Frontend	Vue.js, React.js jQuery
Database	PostgreSQL, MySQL, MariaDB, ETL, Elasticsearch, Kibana
Research	IoT Security, MFA Framework, OneM2M Standard, Biometric AI, LSTM for Data Augmentation
Methods	Jira, Scrum, Kanban, SWEBOK, SIT/UAT, Requirement Management

Experiences

Infini Solution | Software Engineer | 2023.05 – 2025.10 (2 years 6 months) · Seoul, Korea

- RAG based AI Chatbot Prototype**
- Owned end-to-end design and implementation of company's first RAG-based AI chatbot, from infrastructure architecture through LLM evaluation; presented findings to executives, shaping the company's AI transformation roadmap.
 - Stack:** FastAPI, Python, LangChain, Elasticsearch, Cohere API, Docker, PyTorch, JavaScript
- PDF-based ETL Pipeline Development - SKHynix**
- Integrated document management and OCR analysis services via API, automating data extraction, processing and database ingestion.
 - Stack:** Spring Boot, PostgreSQL, OpenText Intelligence
- Cloud-based OpenText Exstream Validation**
- Set up a local Kubernetes environment on Ubuntu and validated OpenText Exstream deployment using Helm Charts; Documented the process to support customer onboarding.
- OpenText Exstream POC Project On-Site Support (4 months) - KB Bank**
- Performed deployment, debugging and customization within a regulated financial institution environment with strict security policies and compliance requirements.
 - Stack:** RedHat, Java, PostgreSQL

Ideatech | Software Engineer | 2021.12 – 2023.04 (1 year 5 months) · Seoul, Korea

- API Gateway Service Feature Development**
- Added dynamic routing and circuit breaker functionality to a Spring Cloud Gateway-based API gateway service.
 - Contributed to UI modifications on a JavaScript-based web admin panel.
 - Stack:** Spring Boot, Java, MySQL, JavaScript
- API Gateway Configuration Management Desktop Application Development**
- Designed and built a PyQt-based configuration management desktop application from scratch, enabling GUI-based settings management without direct yml/env file editing.
 - Stack:** Python, PyQt
- C-Level Strategy Contribution and Biometric Technology Research**
- Participated in C-level strategy meetings and conducted a feasibility study on biometric technology adoption for data extraction at the CEO's request

SES Laboratory (Sejong University) | Research Assistant | 2019.03 – 2021.08 (2 years 6 months) · Seoul

Research on AI Biometric Multi-Factor Authentication Framework Based on OneM2M (IoT Interworking/Interoperability Standard) Security Architecture

- Proposed an IoT MFA framework combining challenge-response mechanisms with AI-based biometric authentication.
- Investigated the feasibility of training AI models on limited biometric datasets using LSTM-based data augmentation and window slicing techniques.
- Analyzed the potential of human body impedance as a biometric identifier and proposed it as a novel authentication factor.
- **Stack:** JavaScript, Node.js, Flask, Python, Scikit-learn, Matlab

IoT Interworking Demo Project (Solar Panel, Modbus and OneM2M Standards)

- Built a real-time monitoring dashboard and backend pipeline using VueJS, NodeJS, and WebSocket, enabling real-time visibility into IoT solar panel data.
- Built a Node.js Express-based proxy server to receive, parse, and structure alarm data from Modbus-based IoT solar panels, then stream it in real time via WebSocket and integrate it with a VueJS-based monitoring dashboard.
- **Stack:** JavaScript, Node.js, Vue.js

Verint System | Technical Consultant | 2018.01 – 2019.02 (1 year 2 months) · Indonesia

Postpaid Customer Billing ETL Service Enhancement and Maintenance

- Maintained a long-running legacy billing ETL service – added schemas to convert postpaid billing data for 170M+ subscribers into email content, handled CR-based service modifications, and performed SIT.
- Collaborated remotely with an Australian offshore team to assist in writing SQL scripts for bulk Excel-to-database migration.
- **Stack:** Spring Batch, Java, MySQL, IBM WebSphere

Mitracomm Ekasarana | Software Engineer | 2016.04 – 2017.12 (1 year 9 months) · Indonesia

Financial Services Development for Major Indonesian Banks (DBS, UOB, Muamalat)

- Implemented Java multithreaded microservices to process credit and debit card transaction alerts in real time using RabbitMQ/ActiveMQ-based event-driven architecture; developed a config-based rule/template engine and performed SIT/UAT.
- Customized a USSD internet banking service using Plain Java + Jetty + MySQL; led the DBS project team.

Huawei Services | Software Engineer | 2015.06 – 2015.12 (6 months) · Indonesia

Telecom BTS Telemetry Data Processing and Report Automation

- Improved query performance on large-scale BTS alarm telemetry data by designing MariaDB pre-aggregation tables and implementing Solaris server cron jobs; built a CodeIgniter (PHP)-based web ETL application to automate Excel report generation and scheduled email delivery

Education

Sejong University	Computer and Information Security	Master	2019.03 – 2021.08 · GPA 4.25 / 4.5
Sriwijaya University	Information System	Bachelor	2008.01 – 2014.01 · GPA 3.40 / 4.00

Award

2020.11 · KICS Fall Conference Best Paper Award, Seoul National University – Binary Classification Model Based on Machine Learning for IoT Personal Authentication Using Human Impedance

Publications

2021.08 · M.S. Thesis, Sejong University – A Study of Authentication System in M2M Ecosystem Using Human Impedance and AI

2020.10 · IEEE ICTC 2020 – Seamless Human Impedance-based IoT Authentication with Machine Learning Techniques

2021.06 · Korean Institute of Communications and Information Sciences, Summer Conference —Data Augmentation on Limited Biometric Data Set for M2M Authentication Model Testing

2020.11 · Korean Institute of Communications and Information Sciences, Fall Conference —Binary Classification Model Based on Machine Learning for IoT Personal Authentication Using Human Impedance

2020.02 · Korean Institute of Communications and Information Sciences, Winter Conference— Flexible IoT Conformance Testing System

2014.05 · IEEE International Symposium on Technology Management and Emerging Technologies —Detecting Major Disease in Public Hospital Using Ensemble Techniques
